EDUCATION

Tufts University, Medford, MA
Bachelor of Science in Computer Science

GPA: 3.68
Aug 2022 – May 2026

EXPERIENCE

Software Engineer

Sep 2025 – June 2026

Sarvia AI

Cambridge, MA

- Optimized Sarvia's real-time voice AI screening agent, engineering a 35% reduction in end-to-end latency by tuning VAD thresholds, refining prompts, benchmarking and selecting low-latency LLMs, and offloading non-blocking tasks to asynchronous workers.
- Built LLM function-calling tools enabling the voice agent to autonomously schedule appointments, confirm via email, escalate to a human operator, book Uber rides, and coordinate callbacks.
- Engineered a scalable, HIPAA-compliant RAG pipeline microservice for automated clinical trial matching, parsing EHR records against eligibility criteria to surface qualified patients with 99% validation accuracy on internal benchmarks.

AI Engineer Intern

Jun 2025 – Sep 2025

Core Perform

remote

- Developed and deployed a suite of RAG agents to automate client onboarding, personalized plan generation, weekly progress tracking, and offboarding, reducing manual operational workload by $> 5\times$.
- Worked directly with internal teams, coaches, and clients to run pilots, gather feedback, and iteratively refine agent behavior and improve reliability in real-world use.
- Led the design of PostgreSQL schema, implementing B-tree indexing and query tuning to achieve optimized retrieval.

AI Research Assistant

Aug 2025 – May 2026

Tufts University

Medford, MA

- Built a high-dimensional ETL pipeline using Python and Xarray to ingest, clean, and normalize 63 years (1960–2023) of large-scale global geospatial weather data, producing a labeled seasonal-to-subseasonal extreme-weather dataset for downstream modeling and analysis.
- Performed spatiotemporal analysis to evaluate dataset integrity and extreme-event label quality, benchmarking generated events against external reference datasets and quantifying correspondence using precision, recall, and F1 score.

Full-Stack Developer

Sep 2023 – May 2024

Jumbo Code

Medford, MA

- Implemented full-stack features for an internal dashboard used by a local nonprofit, contributing across a React frontend and Django backend to support store owners' day-to-day operations.
- Worked in a shared codebase using Git, sprint-based development, and CI/CD-supported workflows, regularly integrating features to support reliable team-based delivery.

PROJECTS

E.L.A.R.A *Enhanced Language Acquisition & Response Agent* 🗣️

- Created an AI voice-calling platform enabling users to design custom AI agents and place phone calls to friends.
- Engineered a FastAPI backend with OAuth2/JWT authentication and a real-time voice pipeline using Pipecat to orchestrate GPT-4, Deepgram STT, and ElevenLabs TTS, with Silero VAD enabling natural turn-taking over Twilio WebSocket media streams, plus dual-channel audio capture and streaming playback.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C++, Swift

Frameworks & Libraries: React, Next.js, FastAPI, Django, LangChain, LangGraph, PyTorch, Pydantic, Pipecat

Cloud & Tools: AWS (ECS, EC2, S3, RDS), IAM, Docker, Git, CI/CD

Databases & Storage: PostgreSQL, MySQL, Supabase, Redis, FAISS
